            ## About This Project

            **Multi-Agent AI Debate System** is an innovative
application that simulates expert
            panel discussions using multiple AI agents with distinct
perspectives.

            ### Key Features:
            - □ **Three AI Agents**: Each with unique expertise and
viewpoints
            - □ **Intelligent Scoring**: Automated evaluation of
argument quality
            - □ **Multi-Round Debates**: Configurable 1-4 round
discussions
            - □ **Custom Agents**: Create your own agent personalities
            - □ **Debate History**: Review past debates
            - □ **PDF Export**: Download professional debate reports

            ### Technology Stack:
```

```
            - **Python 3.x**
            - **Transformers (Hugging Face)** - NLP models
            - **Gradio** - Interactive web interface
            - **GPT-2** - Text generation
            - **ReportLab** - PDF generation

            ### Use Cases:
            - Educational: Teaching critical thinking
            - Business: Exploring different strategies
            - Research: Studying multi-agent systems
            - Decision Support: Analyzing multiple perspectives

---

# Multi-Agent AI Debate System

Simulating expert panel discussions using AI agents with different
perspectives.

## Features
- 🤖 Three AI agents with unique viewpoints
- 📊 Automated argument scoring
- 📄 PDF export
- 📜 Debate history
- 🎨 Custom agent personalities
'''

with open('/content/deployment_files/README.md', 'w') as f:
    f.write(readme)

print("✅ All deployment files created!")
print("\nFiles created in /content/deployment_files/:")
print("  - app.py")
print("  - requirements.txt")
print("  - README.md")
```

```
✅ All deployment files created!

Files created in /content/deployment_files/:
  - app.py
  - requirements.txt
  - README.md
```

```python
# Zip all files for easy download
!cd /content/deployment_files && zip -r deployment_files.zip .
print("✅ Files zipped!")
print("\nNow download the zip file:")

from google.colab import files
files.download('/content/deployment_files/deployment_files.zip')
```

```
  adding: app.py (deflated 73%)
  adding: requirements.txt (deflated 4%)
  adding: README.md (deflated 34%)
 Files zipped!

Now download the zip file:

##  Overview

The **Multi-Agent AI Debate System** is an innovative application that
```

demonstrates advanced concepts in Generative AI and Agentic AI by orchestrating autonomous agents to engage in structured debates on complex topics.

The Problem
Complex decisions often benefit from multiple perspectives, but traditional AI systems typically provide a single viewpoint.

The Solution
This system simulates expert panel discussions where three AI agents with different expertise and stances debate topics, challenge each other's reasoning, and provide comprehensive analysis.

Built for: Wipro AI Track Training Assessment
Focus Areas: Deep Learning, Machine Learning, Generative AI, Agentic AI
Development Period: February 2026

□ Key Features

□ Three Distinct AI Agents
Each agent has a unique role, expertise area, and stance:
- **Dr. Sarah Chen** - AI Ethics Researcher (Cautious perspective)
- **Marcus Rivera** - Tech Entrepreneur (Optimistic perspective)
- **Prof. Anika Sharma** - Policy Expert (Balanced perspective)

□ Intelligent Scoring System
- Automated evaluation of argument quality and strength
- Keyword-based scoring algorithm
- Medal-based ranking system (□□□)

□ Multi-Round Debates
- Configurable debate rounds (1-4 rounds)
- Context-aware argument generation
- Progressive discussion development

□ Custom Agent Personalities
- **NEW!** Create your own agents with custom:
  - Names and professional identities
  - Expertise areas and roles
  - Stances and perspectives

□ Debate History
- **NEW!** Automatic tracking of all debates
- View past debates by number
- Statistics and performance tracking
- JSON-based storage system

□ PDF Export
- **NEW!** Professional debate reports
- Download debates as formatted PDFs
- Include all rounds, scores, and analysis
- Shareable documentation

□ Comprehensive Analysis
- Detailed insights and key takeaways
- Argument strength comparison
- Multi-perspective conclusions

□ Interactive UI
- User-friendly Gradio interface
- Real-time debate visualization
- Tabbed navigation system
- Example topics for quick start

□ Live Demo

Try it now: [YOUR_HUGGINGFACE_SPACE_URL]

No installation required! The app is deployed on Hugging Face Spaces with:
- □ Free, permanent hosting
- □ Public accessibility
- □ Automatic scaling
- □ 24/7 availability

Tech Stack

Core Technologies
- **Python 3.11** - Primary programming language
- **Transformers (Hugging Face)** - NLP model implementation
- **GPT-2** - Base language model for text generation
- **Gradio 6.8.0** - Interactive web interface
- **ReportLab** - PDF generation

Libraries & Dependencies
```
transformers - Natural Language Processing
torch - Deep learning framework
gradio - Web UI framework
reportlab - PDF document generation
accelerate - Model optimization
```

Development Tools
- Google Colab - Development environment
- Hugging Face Spaces - Deployment platform
- Git/GitHub - Version control

□ Installation

Option 1: Google Colab (Recommended for Quick Demo)

1. **Open Google Colab:** https://colab.research.google.com
2. **Create New Notebook**
3. **Install Dependencies:**
```python
!pip install -q transformers accelerate gradio reportlab
```

4. **Clone Repository:**
```python
!git clone https://github.com/Swastikraj599/Multi-Agent-Debate-System.git
%cd Multi-Agent-Debate-System
```

5. **Run the Application:**
```python
!python app.py
```

Option 2: Local Installation

1. **Clone the Repository:**
```bash
git clone https://github.com/Swastikraj599/Multi-Agent-Debate-System.git
cd Multi-Agent-Debate-System
```

2. **Create Virtual Environment:**
```bash
python -m venv venv
source venv/bin/activate  # On Windows: venv\\Scripts\\activate
```

3. **Install Dependencies:**
```bash
pip install -r requirements.txt
```

4. **Run the Application:**
```bash
python app.py
```

5. **Access the Interface:**
Open your browser and go to: `http://localhost:7860`

□ Usage Guide

Basic Usage

1. **Enter Topic:** Type any debate-worthy topic in the text field
   - Example: "Should AI development be regulated by governments?"

2. **Select Rounds:** Use slider to choose 1-4 debate rounds
   - 2 rounds recommended for quick demos
   - 3-4 rounds for comprehensive debates

3. **Start Debate:** Click the "□ Start Debate" button

4. **View Results:** Watch the debate unfold with real-time arguments

5. **Analyze Scores:** Review the scoring and ranking at the end

6. **Download PDF:** Get a professional report of the debate

Advanced Usage

Custom Agent Personalities

1. Go to **"□ Custom Agents"** tab
2. Fill in agent details:
   - **Name:** Professional identity
   - **Role:** Area of expertise
   - **Stance:** Perspective on issues
3. Enable "Use Custom Agents" checkbox
4. Start your debate

View Debate History

1. Go to **"□ Debate History"** tab
2. Click **"□ Refresh History"** to see all debates
3. Enter a debate number and click **"□ Load Debate"** to view details

Example Topics

Technology:
- "Should AI development be regulated by governments?"

- "Will AI replace human jobs or create new opportunities?"

Work Culture:
- "Is remote work better than office work for productivity?"

Social Media:
- "Should social media companies be responsible for content moderation?"

Economy:
- "Should cryptocurrencies replace traditional currency?"

Project Architecture

System Design
```
User Input (Topic)
      ↓
Debate Orchestrator
      ↓
┌──────────────────────────────────┐
│  Agent 1   Agent 2   Agent 3     │
│ (Cautious) (Optimistic) (Balanced)│
└──────────────────────────────────┘
      ↓
Multi-Round Debate
      ↓
Scoring & Analysis Engine
      ↓
┌──────────────────────────────────┐
│ Output + PDF + History Storage   │
└──────────────────────────────────┘
```

Agent Design

Each agent is initialized with:
- **Name & Role:** Professional identity
- **Expertise Area:** Specialized knowledge domain
- **Stance:** Perspective on issues (cautious/optimistic/balanced)
- **Argument Generator:** GPT-2 based text generation with custom prompting

Debate Flow

1. **Topic Selection:** User inputs debate topic
2. **Round Configuration:** User selects number of rounds (1-4)
3. **Sequential Arguments:** Agents present arguments in order

4. **Context Awareness:** Each agent considers previous arguments
5. **Scoring Mechanism:** Arguments evaluated on length and quality keywords
6. **Final Analysis:** Comprehensive summary with rankings and insights

Scoring Algorithm
```python
score = Base_Score + Quality_Bonus

Base_Score = len(argument.split())  # Word count

quality_keywords = ['evidence', 'research', 'data', 'study',
                    'however', 'therefore', 'because', 'consider']

Quality_Bonus = sum(2 for keyword in quality_keywords
                    if keyword in argument.lower())
```

□ Advanced Features

1. Custom Agent Creation
Create domain-specific agents for specialized debates:
- Healthcare debates with medical professionals
- Financial discussions with economists
- Technical debates with engineers

2. Debate History System
- Automatic JSON-based storage
- Retrieve past debates by ID
- Statistics tracking (total debates, win rates)
- Pattern analysis capabilities

3. PDF Export Functionality
- Professional formatting with ReportLab
- Includes all debate rounds
- Participant information
- Scoring and rankings
- Timestamped reports

4. Context-Aware Responses
Agents consider:
- Previous round arguments
- Opponent positions
- Conversation history (last 300 characters)

□ Use Cases

Educational
- **Critical Thinking:** Teach students to analyze multiple perspectives
- **Debate Practice:** Prepare for competitions
- **AI Education:** Demonstrate multi-agent systems and NLP

Business
- **Strategy Discussions:** Explore different business approaches
- **Risk Assessment:** Analyze decisions from multiple angles
- **Decision Support:** Get comprehensive viewpoint analysis

Research
- **Multi-Agent Systems:** Study agent coordination and behavior
- **Argumentation Patterns:** Analyze debate structures
- **LLM Capabilities:** Test language model performance in structured tasks

Content Creation
- **Balanced Articles:** Generate multi-perspective content
- **Brainstorming:** Explore topics from all sides
- **Script Writing:** Create dialogue for debates/discussions

---

□ Screenshots

Add screenshots of your application here:

1. **Main Interface** - Debate configuration screen
2. **Debate in Progress** - Real-time argument generation
3. **Final Analysis** - Scores and rankings
4. **Custom Agents** - Agent personality configuration
5. **Debate History** - Past debates view

□ Future Enhancements

Planned Features
- [ ] Integration with advanced LLMs (Llama 3, Mistral)
- [ ] Vote counting and audience interaction
- [ ] Debate summary generation using abstractive summarization
- [ ] Support for more than 3 agents
- [ ] Topic-specific agent expertise customization
- [ ] Debate history comparison features
- [ ] Real-time sentiment analysis of arguments
- [ ] Multi-language support
- [ ] Visual debate flow diagrams

Advanced Improvements
- [ ] Reinforcement Learning for argument quality improvement
- [ ] Fact-checking integration with external knowledge bases
- [ ] Agent personality customization by users
- [ ] Debate tournament mode with multiple topics

🎯 Project Highlights

Innovation
🔹 Multi-agent orchestration without paid APIs
🔹 Automated argument evaluation system
🔹 Context-aware debate progression
🔹 Real-time scoring and analytics
🔹 Custom agent personality system

Technical Excellence
🔹 Modular and scalable architecture
🔹 Efficient prompt engineering
🔹 Clean code with proper documentation
🔹 User-friendly interface design
🔹 Production-ready deployment

Practical Application
🔹 Addresses real-world decision-making scenarios
🔹 Demonstrates GenAI and Agentic AI concepts
🔹 Showcases AI safety considerations (multiple perspectives)
🔹 Production-ready deployment via Gradio sharing

⚠️ Known Limitations

1. **Model Constraints:** GPT-2 generates shorter, less sophisticated arguments compared to larger models
2. **Context Window:** Limited conversation history to prevent token overflow
3. **Scoring Simplicity:** Current scoring is keyword-based; could be enhanced with semantic analysis
4. **Response Time:** Multiple agent generations can take 15-30 seconds per round
5. **Consistency:** Arguments may occasionally lack deep logical connections

These limitations are acknowledged and provide opportunities for future improvements.

□ Learning Outcomes

AI/ML Concepts Demonstrated
□ Natural Language Processing (NLP)
□ Text Generation with Transformers
□ Multi-agent systems and coordination
□ Prompt engineering techniques
□ Generative AI applications
□ Agentic AI behavior modeling

Technical Skills Applied
□ Python programming
□ Hugging Face Transformers library
□ Gradio UI development
□ System architecture design
□ Model deployment and sharing
□ Git/GitHub version control

□ Contributing

Contributions are welcome! Please feel free to submit issues or pull requests.

How to Contribute

1. **Fork the repository**
2. **Create a feature branch:**
```bash
git checkout -b feature/AmazingFeature
```

3. **Commit your changes:**
```bash
git commit -m 'Add some AmazingFeature'
```

4. **Push to the branch:**
```bash
git push origin feature/AmazingFeature
```

5. **Open a Pull Request**
